Summary

Aspiring software developer with a strong foundation in programming and hands-on experience building practical applications. Continuously learning to design scalable systems, develop efficient solutions, and work across the full software development lifecycle. Passionate about writing clean, maintainable code and improving through real-world projects.

Technical Skills

- **Languages:** Python
- **Databases:** MySQL, MongoDB, ChromaDB
- **Technologies:** React Js, TailwindCSS, FAST API, REST APIs
- **ML & DL:** TensorFlow, Scikit-learn, Transformers, Langchain
- **Tools & Platforms:** Git, Docker, Postman, Google Cloud

Education

B.Tech, Artificial Intelligence & Machine Learning *Sri Shakthi Institute of Engineering and Technology* 2023 – 2027

- CGPA: 8.33 / 10.0

Higher Secondary

Sri Aanoor Vidyalaya Matric Higher Secondary School 2022 – 2023

- Percentage : 86.17%

Experience

Amazon ML Summer School Mentee

Amazon

Remote, Aug - 2025

- Developed and optimized modular Python programs with clean coding practices and efficient data handling.
- Engineered end-to-end ML pipelines for data preprocessing, model execution, and evaluation with focus on performance and correctness.
- Collaborated in industry-style workflows including debugging, optimization, and reviews under mentorship.

Software Project Intern (Virtual)

Infosys Springboard

Aug-Nov - Batch 2, 2025

- Developed an emotion-based music recommendation system using machine learning and Spotify API.
- Built a FastAPI backend and React frontend with RESTful APIs for personalized music recommendations.
- Followed structured development practices like testing, development, and deployment-ready architecture.

Projects

Multiformat AI Intake System

Agentic AI, Python, LLM

🔗 Source Code

- Architected an intelligent pipeline using a LLM orchestrator to process and classify unstructured data.
- Developed a multi-agent AI orchestration framework for intent classification and information extraction.
- Containerized the full pipeline with Docker deployment, ensuring scalability and smooth operation.

Brain Tumor Prediction & AI Assistant

Python, Deep Learning, FAST API

🔗 Source Code

- Developed a ResNet-50 based brain tumor classification model achieving 90% accuracy on MRI data.
- Deployed the model as a FastAPI web application for real-time inference and result visualization.
- Integrated a RAG-based medical assistant using FAISS to provide post-diagnosis guidance.

Farm Assist

Python, Gemini, ChromaDB

🔗 Source Code

- Built Farm Assist an AI-driven assistant for real-time crop disease and pest insights.
- Implemented RAG using ChromaDB + CLIP and Gemini 2.5-flash for knowledge search and reasoning.
- Developed FastAPI backend and React Native app with multilingual voice support.

Achievements

- Selected among the top 3000 students nationwide for Amazon ML Summer School, a competitive program on advanced machine learning.
- Finalist at Horizon'25 Hackathon for developing an AI-powered agriculture assistant app and participated in multiple national-level hackathons including Google GenAI Exchange and ISRO Hackathon.
- Solved 500+ DSA problems across various platforms, strengthening problem-solving and coding skills.

Certificates

- Introduction to Generative AI – Coursera (Google Cloud)
- Artificial Intelligence Primer Certification - Infosys Springboard
- Introduction to Git - DataCamp
